

FREQUENTLY ASKED QUESTIONS:

# Southern California Businesses Reduce Energy Spend and Earn Money with Enel X

Since 2007, Enel X has a proven track record of enabling hundreds of organizations throughout Southern California to earn money, save on energy costs, and mitigate carbon emissions with demand response (DR). How does it work? When SCE determines that it needs more supply to meet demand, it dispatches Enel X's demand response network, which is made up of local organizations that have agreed to reduce energy during times of high demand. Our deep well of market expertise provides the tools, guidance, and advocacy businesses need to maximize their DR earning potential today and protect their DR opportunity going forward. With Enel X, participating in demand response has never been easier.

## What is demand response?

Demand response programs provide a no-risk, no-cost opportunity for commercial, institutional, and industrial organizations to earn money while helping maintain reliable electricity throughout Southern California. Program participants receive recurring capacity payments for agreeing to curtail electricity consumption in response to abnormally high electricity demand or electricity price spikes and additional energy payments based on their performance during dispatches.

## How does my business benefit?

### Maximize payments to your bottom line

Enel X offers a broad range of programs to match your need. We manage your participation from start to finish, ensuring you earn the highest possible financial reward. Since 2003, our customers have earned more than \$1B in payments.

### Support your community

Your participation helps maintain reliable electricity throughout Southern California and provides a clean, cost-effective alternative to building new power plants in the community.

## How do I participate?

Enel X makes participation easy. We take care of the complex details so you can stay focused on running your business.

1. Our local experts work with you directly to identify your energy reduction potential and create a strategy that delivers maximum value with minimum impact on your operations. We outline these measures in a detailed Energy Reduction Plan.
2. We install necessary metering devices at your facility to establish communication with our Network Operations Center (NOC), so we can monitor your energy consumption levels in real time.
3. Enel X simulates a DR dispatch to ensure that you are comfortable with your Energy Reduction Plan. At any time during a dispatch, you can log into [apps.enelx.com](https://apps.enelx.com) to view your performance in real-time.
4. Your site is then enrolled and ready to respond if and when a dispatch begins. Throughout the process, we fully manage enrollment, measurement, verification, and payments on your behalf.

## What can I expect during a dispatch?

### Notification

When there is a need for capacity, Enel X will provide notification via email, phone, or SMS informing you of the dispatch details.

### Response

At the start of the dispatch, your facility will reduce its electricity usage according to your pre-determined Energy Reduction Plan—either manually, or automatically through the NOC.

### Support

Before, during, and after a dispatch, the NOC remains in communication with your facility. Our staff is available 24x7x365, supporting you to ensure that you achieve the highest possible levels of performance and payments.

Enel X provides on-demand access to your real-time energy data—giving you the information you need to perform your best during demand response events and to better manage overall energy costs.

## What types of reductions can I make?

Enel X has extensive experience creating reduction strategies that work within the operational limitations of a wide variety of facilities, including cold storage, manufacturers, food processors, universities, malls, office buildings and more.

Common reduction examples include:

- > Reduce non-essential lighting.
- > Modify manufacturing processes.
- > Adjust HVAC equipment.
- > Dial back pumps.
- > Change settings in industrial freezers.

Our customers find that many energy-intensive processes can simply be shifted by a few hours to facilitate dispatch participation. Ask us about our experience working with customers like you.
